EXPERIENCE

Founder August 2026 – Present
Wissa Systems *wissasystems.com*

- Founded an AI agency building and deploying autonomous lead-capturing agents; manage all direct client sales, follow-ups, and project delivery.
- Build and deploy a social media DM agent for a fitness influencer using Claude SDK and OpenRouter, automating responses across Instagram and Facebook Messenger on a self-hosted server.
- Build and deploy an email automation agent for a retreat center, handling inbound inquiries via Gmail and Microsoft integrations.

Research Assistant January 2026 – Present
VR/AR Lab

- Develop immersive VR/AR simulations using Unity and C#, architecting real-time data synchronization between head-mounted displays and external servers.
- Maintain system stability across multiple hardware iterations through version control with Git and rigorous debugging of C# scripts.

Sales Associate October 2021 – October 2022
Noa Jewelers

- Drove sales strategy alignment that helped the team exceed targets by 10% for consecutive quarters.
- Delivered product knowledge training to new hires, improving team consistency and effectiveness.

EDUCATION

New Jersey Institute of Technology (NJIT)
Bachelor of Science (B.S.), Data Science (Computing). *May 2026*
Middlesex Community College
Associate Degree, Computer Science. *May 2023*

SKILLS

AI and Agentic Systems: Multi-Agent Orchestration (Google ADK), Agentic RAG, Model Context Protocol (MCP), LLM Reasoning (Gemini 1.5/3), Semantic Search, Vector Embeddings, Firecrawl, Claude SDK, Prompt Engineering
Frameworks and Cloud: Google Cloud Platform (GCP), AWS (EC2/S3), TensorFlow, PyTorch, Docker
Programming and Data: Python (Pandas, NumPy, Scikit-learn), SQL, Java, C/C++, R, Bash/Linux
Machine Learning and Statistics: XGBoost, Random Forest, SHAP (Model Interpretation), Time-Series Forecasting, Hyperparameter Tuning (GridSearchCV), KNN Imputation
Data Storage and Visualization: MongoDB Atlas (Vector Search), MySQL, Tableau, Power BI, Matplotlib, Seaborn
Tools: Git, GitHub, Unity (C#), Model Deployment, ETL Pipelines

PROJECTS

Autonomous Legal RAG Agent and Infrastructure March 2026

- Engineered a high-performance ingestion pipeline: automated PDF parsing and recursive chunking of U.S. Code, generating 768-dimension vectors via Google text-embedding-004.
- Optimized data throughput by 97% using parallel processing via ThreadPoolExecutor for bulk embedding generation and MongoDB batch inserts.
- Architected an MCP-compliant server to interface Gemini with MongoDB Atlas, enabling autonomous database administration and vector index management.

Autonomous Multi-Agent Intelligence System, Google ADK and GCP February 2026

- Engineered a 3-agent system using Google ADK and Gemini, featuring a Coordinator Agent that autonomously delegates tasks to specialized Research and Summary sub-agents.
- Developed a multi-step workflow where a Research Agent analyzes real-time content and a Summary Agent generates comprehensive reports, optimizing research efficiency by 80%.

Capstone: Lung Cancer Incidence Prediction and Risk Analysis December 2025

- Developed a data engineering pipeline merging 20+ annual AQI datasets with CDC health records, processing 14,000+ cleaned entries using KNN imputation and standardization.
- Optimized XGBoost and Random Forest regressors via 5-fold grid-search cross-validation, achieving an R^2 of 0.96 and a test RMSE of 2.90.
- Engineered time-series lag features (up to 20 years) and integrated geographical coordinates (Lat/Long), identifying location as a primary risk predictor.
