

Assignment 2

In this assignment, you will complete the development of a personal profile website using React class components. The website includes navigation between different sections and showcases your portfolio, resume, and contact information. Your project should have the following files (some are already completed):

src/

├─ App.js	← You will update this file
├─ App.css	← Already provided
├─ About.js	← You will complete this file
├─ About.css	← You will complete this file
├─ Portfolio.js	← You will complete this file
├─ Portfolio.css	← You will complete this file
├─ Resume.js	← Already provided(update with your information only)
├─ Resume.css	← Already provided
├─ Contact.js	← Already provided(update with your information only)
├─ Contact.css	← Already provided
└─ index.js	← Already provided(update with your information only)

You can download the project starter codes from [this link](#). After downloading the zip file, unzip it, then run `npm install` followed by `npm start` to launch the project. Write your code in the specified file **without using any third-party modules**, following the requirements outlined below:

App Component Requirements (10 points)

- **Navigation Logic:** Complete the conditional rendering in the main content area (commented in the code).
- **State Management:** The navigation should work with the existing state structure
- **Component Integration:** Properly display About and Portfolio components based on current state

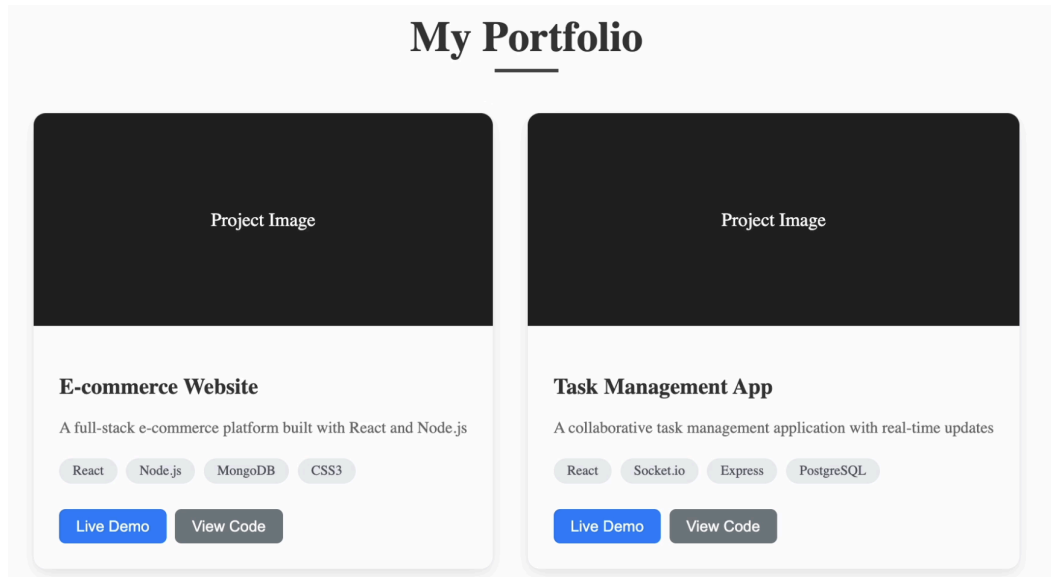

About Component Requirements (30 points)

1. **Class Component Structure:** Must be a React class component extending Component
2. **Professional Image:** Include a placeholder for your photo
3. **Layout:** Use Flexbox design for layout
4. **Visual Appeal:** Include colors, spacing, and visual elements as demonstrated in the image below.

Portfolio Component Requirements (40 points)

1. **State Management:** Projects should be stored in the component's state variable and use map function in the render function to display them from the state.
2. **Project Information:** Each project should include title, an image, project description, technologies and two buttons as demonstrated in the image above.
3. **Layout:** Use CSS Flexbox for project cards
4. **Card Design:** Create visually appealing project cards as demonstrated in the image below.

Deployment Requirements (20 points)

Deploy your react project to GitHub Pages. Ensure that the webpage is accessible online through a GitHub Pages URL. ([How to Deploy React App to GitHub Pages | Step by step.](#))

Successful completion of this assignment should result in the following visual appearance and functionalities:

Submission Requirements:

- Submit all `.js` and `.css` files from your **src** folder. **Do not submit them as a zip file.**
- Include the URL of your hosted GitHub application in your submission.
